

Modular Casebook Management: `modbook.sty`

Charles Duan
cduan@wcl.american.edu

Version v1.0.0, 2024/01/09

This is a package for managing the compilation of a textbook made up of several interdependent modules. The purpose of this package is:

- To manage cross-dependencies between parts of the textbook. For example, one part may reference a case that should have been already read in the book, so it should be possible to raise a warning if that case hasn't already been included.
- To provide formatting for standard parts of a casebook.
- To permit local alterations to casebook files. This requires devising a directory structure for local files, such that including a file searches first for the local copy and then for default version.

The general workflow model assumed by this package is as follows. Textbooks are to be compiled out of cases, articles, and other materials described in this documentation as *readings*. One or more *editors* compile, edit, and annotate these readings, and perhaps write editorial material of their own. The editors arrange their work into *modules*, each of which contains an outline and content files including readings. A *compiler* then receives modules and arranges them into a book. The compiler may also wish to make changes to the editors' work.

1 Module Management

This package uses a rigorous file hierarchy to manage the work of editors and compilers. At the base of the hierarchy are *repositories* of content. Generally an editor (or team of editors) would be responsible for a single repository. Within each repository are *modules* contained in subfolders. Modules contain content files consistent with the following rules:

- `<module>/<module>.tex`: The default outline of the module. This file should contain only section headings, `question` environments, and `\import` commands.

- $\langle module \rangle / \text{intro-} \langle module \rangle .\text{tex}$: The introductory text for a module should by convention have this name, making it convenient to determine whether a module has been imported into a book.¹
- $\langle module \rangle / \text{intro-} \langle filename \rangle .\text{tex}$: A file containing editorial or introductory text (that is, text not part of a case or other reading).
- $\langle module \rangle / \text{narrative-} \langle filename \rangle .\text{tex}$: The same as an `intro-` file. (Starting a filename with `narrative-` can be used to indicate that the text is intended as a full standalone section, rather than as an introduction to another reading.)
- $\langle module \rangle / \langle filename \rangle \text{-qs.tex}$: A list of questions and notes that may follow a reading. By convention, $\langle filename \rangle$ corresponds to the file to which the questions apply. A question file will be included inside a list-like environment, so items should begin with `\item`.
- $\langle module \rangle / \langle filename \rangle .\text{tex}$: Any other filename is assumed to be a reading from an external source (which should start with `\reading`).

`\RepositoryPath` $\{ \langle path, \dots \rangle \}$

The package will sequentially search through each repository given in the argument, which should be a comma-separated list, until it finds the module file required. The default path is `local,base`.

```
1 \newcommand\RepositoryPath#1{\def\mbk@repo@path{#1}}
2 \RepositoryPath{local,base}
3 %
```

`\import` $\langle name \rangle$

The `\import` command is the key command for incorporating content files into a casebook. It is used both in the overall book to import modules, and in the module files (primarily $\langle module \rangle / \langle module \rangle .\text{tex}$) to import content for each module.

The macro takes one argument, which need not be surrounded by braces, similar to `\input`. The argument may be:

1. A content file without a module name. The file is assumed to be within the last-`\imported` module.
2. A content file with a module name ($\langle module \rangle / \langle filename \rangle$).
3. A module name alone, in which case $\langle module \rangle / \langle module \rangle .\text{tex}$ is used.

```
4 \def\import #1 {
5   \find@in{/}{#1}{\mbk@import@newmod}{%
6     \mbk@import@nomod{#1}
7   }%
```

¹It is generally inadvisable to check if the $\langle module \rangle / \langle module \rangle .\text{tex}$ file itself has been imported, because compilers will often not use the default outline when selecting parts of modules.

```

8 }
9 \make@find@in{/}
10 %

```

Implementation: Finding Module Files

Imports where a module name is given. #1 is the module name, #2 the file name.

```

11 \def\mbk@import@newmod#1#2{%
12   \mbk@try@modfile{#1}{#2}%
13   \mbk@try@file@default
14   \PackageError{modbook}{No file `#1/#2.tex' found}{%
15     Check that the file exists%
16   }%
17   \mbk@try@file@end
18 }
19 %

```

Imports where no module name is given. #1 is the filename.

```

20 \def\mbk@import@nomod#1{%
21   \mbk@try@modfile{\mbk@module@cur}{#1}%
22   \mbk@try@modfile{#1}{#1}%
23   \mbk@try@file@default
24   \PackageError{modbook}{No file `#1.tex' found}{Check that the file
25   exists}%
26   \mbk@try@file@end
27 }
28 %

```

Tries a module file, across all the repositories. #1 is the module, #2 the file.

```

28 \def\mbk@try@modfile#1#2{%
29   \expandafter\mbk@try@modfile@\mbk@repo@path,\@nil{#1}{#2}%
30 }
31 \def\mbk@try@modfile@#1,#2\@nil#3#4{%
32   \mbk@try@file{#1/#3/#4}{%
33     \mbk@module@push{#3}%
34     \mbk@register@file{#3}{#4}%
35     \def\mbk@current@file{#4}%
36     \mbk@formatting@for{#4}%
37     @@input #1/#3/#4 %
38     \mbk@module@pop
39   }%
40   \ifstrempy{#2}{-}{\mbk@try@modfile#2\@nil{#3}{#4}}%
41 }
42 %

```

Implementation: Tracking the Current Module and File

Module imports are tracked via a stack, so it is always possible to know which module is in current use. (The normal TeX grouping mechanism cannot be used, because otherwise content would be included inside groups.)

The current module.

```
43 \def\mbk@module@cur{}
44 %
```

The current file.

```
45 \let\mbk@current@file\relax
46 %
```

The stack of module inclusions. The list is comma-separated and always ends in a comma unless it is empty.

```
47 \def\mbk@module@stack{}
48 %
```

Push a module onto the stack. The module should be given as #1.

```
49 \def\mbk@module@push#1{\gpreto\mbk@module@stack{#1,}\edef\mbk@module@cur
{#1}}
50 %
```

Delete a module from the stack. If one tries to pop the last module from the stack, this macro will generate an argument error (there won't be enough commas).

```
51 \def\mbk@module@pop{%
52   \expandafter\mbk@module@pop@\mbk@module@stack\@stop
53 }
54 \def\mbk@module@pop@#1,#2,#3\@stop{%
55   \gdef\mbk@module@stack{#2,#3}%
56   \gdef\mbk@module@cur{#2}%
57 }
58 %
```

Implementation: File Inclusion

Tries including a file among several. Several `\mbk@try@file` commands may be included in sequence, terminated with `\mbk@try@file@end`. If one such command succeeds, then any other material up to `\mbk@try@file@end` will be discarded.

#1 is the file to try, #2 is material to include if the file is found.

```
59 \def\mbk@try@file#1#2{%
60   \openin\@inputcheck"#1"
61   \@test\ifeof\@inputcheck\fi}{%
62     \closein\@inputcheck
63     \mbk@try@file@use{#2}%
64   }%
65 }
```

```

66 \def\mbk@try@file@use#1#2\mbk@try@file@end{#1}
67 %
    What to do if no \mbk@try@file commands succeed. All material up to
    \mbk@try@file@end is used.
68 \def\mbk@try@file@default#1\mbk@try@file@end{#1}%
69 \let\mbk@try@file@end\@empty
70 %

```

2 Cross-Reference Expectations

Content in modules will often cross-reference material in other modules. But if the compiler can select and reorder the modules, these cross-references will become unanchored. The package thus provides several macros to manage cross-references. Editors should insert these macros into their module files as they write, enabling their modules and files to be rearranged without creating contextual problems.

Expectations are defined based on filenames, and are met if a corresponding file has been `\imported` into the book at the correct time. Filenames may be given with the module name or without. (The best practice, then, is to ensure that filenames are unique even across different modules.)

Failures of any of the expectation assertions below will result in a warning and an undefined-reference warning at the end of document compilation.

`\having` `{\filename} {\langle before \rangle} {\langle after \rangle} {\langle none \rangle}`

Chooses a text depending on the inclusion status of `\filename`. If the file has already been `\imported`, then `\langle before \rangle` is used. If the file is imported later, then `\langle after \rangle` is used. If the file is never imported, then `\langle none \rangle` is used.

This macro best enables flexibility for compilers, and should be used in preference to the other expectation assertion macros to the extent possible.

`\expected` `{\filename}`

Tests whether a file has been included already, and produces a warning if not.

```

71 \def\expected#1{%
72   \@ifundefined{mbk@reg@#1}{%
73     \PackageWarning{modbook}{%
74       In file `~\mbk@current@file',^^J%
75       file `#1' was expected but not already included%
76     }%
77     \G@refundefinedtrue
78   }{}%
79 }
80 %

```

`\expecting` `{\filename}`

Tests whether a file will later be included. The test fails if the file is never included, or if the file was included before this command was called. Because it relies on the `.aux` file, this command may produce spurious warnings that go away on subsequent compilations.

```

81 \def\expecting#1{%
82     \@ifundefined{mbk@reg@#1}{%
83         \@ifundefined{mbk@preg@#1}{
84             \PackageWarning{modbook}{%
85                 In file `~\mbk@current@file',^^J%
86                 file `#1' is expected later but was not included%
87             }%
88             \G@refundefinedtrue
89         }{}%
90     }{%
91         \PackageWarning{modbook}{%
92             In file `~\mbk@current@file',^^J%
93             file `#1' is expected later but was already included%
94         }%
95         \gdef\@refundefined{%
96             \@latex@warning@no@line{References were out of order}%
97         }%
98     }%
99 }
100 %

```

\expectnext $\{ \langle filename \rangle \}$

Indicates that the next imported file should match this filename. This is used, for example, at the end of an introductory text intended to precede a reading.

```

101 \def\expectnext#1{%
102     \gdef\mbk@expectnext{#1}%
103 }
104 \let\mbk@expectnext\relax
105 %

```

Implementation

To implement this cross-reference checking, every file is “registered” at the time it is imported. The registration confirms any assertions that can be determined upon registration, and records information for further checking.

#1 is the module, #2 is the file.

```

106 \def\mbk@register@file#1#2{%
107     \def\reserved@a{#2}%
108     \ifx\mbk@expectnext\relax\else
109         \ifx\reserved@a\mbk@expectnext\else
110             \def\reserved@a{#1#2}%
111             \ifx\reserved@a\mbk@expectnext\else
112                 \PackageWarning{modbook}{%
113                     In file `~\mbk@current@file',^^J%
114                     file `~\mbk@expectnext' should have been included here
115                     ,^^J%
116                     but `#1#2' was included instead%
117                 }%
118             }%
119         }%
120     }%

```

```

117         \G@refundefinedtrue
118         \fi
119         \fi
120         \global\let\mbk@expectnext\relax
121     \fi
122     \global\@namedef{mbk@reg@#1#2}{}%
123     \global\@namedef{mbk@reg@#2}{}%
124     \immediate\write\@auxout{%
125         \string\mbk@register@pre{#1#2}%
126         \string\mbk@register@pre{#2}%
127     }%
128 }
129 %

```

Marks that a file will be included at a later time.

130 \def\mbk@register@pre#1{%
131     \global\@namedef{mbk@preg@#1}{}%
132 }
133 %

```

3 Formatting Content

Casebooks generally use only a few types of materials for readings, and also include common types of editorial content. The macros here help with formatting these elements consistently.

3.1 Readings

These commands are useful for formatting a reading from a case or other materials. Typical usage is as follows:

```

\readingnote{Decided on the same day as Bolling v. Sharpe, 347
U.S. 497 (1954).}
\reading{Brown v. Board of Education}
\readingcite{347 U.S. 483 (1954)}

```

```

\opinion \textsc{Mr. Chief Justice Warren} delivered the opinion
of the Court.

```

```

These cases come to us from the States of Kansas, South Carolina,
Virginia, and Delaware...

```

`\readingnote` `{\note-text}`

Adds a footnote to the reading's heading. This command *must come before* the `\reading` command.

```

134 \def\readingnote#1{\def\mbk@readingnote{#1}}%
135 \let\mbk@readingnote\relax

```

136 %

\reading [*short-name*] {*name*}

Creates a section heading starting a reading. The title of the reading is given as *name*, and a short Table of Contents version may be given as *short-name*.

As a convenience, if *name* starts with *In re* or contains *v.*, the name (and short name) will automatically be italicized for being a case name.

```

137 \def\reading{%
138     \@dblarg\mbk@oreading
139 }
140 \def\mbk@oreading[#1]#2{%
141     \refstepcounter{reading}%
142     \find@in{ v. }{#2}{\mbk@oreading[\emph{#1}]{\emph{#2}}\@gobbletwo}{%
143         \find@start{In re }{#2}{\mbk@oreading[\emph{#1}]{\emph{#2}}\@gobble
144     }{%
145         \@test\ifx\mbk@readingnote\relax\fi{%
146             \mbk@reading[#1]{#2}%
147         }{%
148             \mbk@reading[#1]{#2\edfootnote{\mbk@readingnote}}%
149             \global\let\mbk@readingnote\relax
150         }%
151     }%
152 }
153 \make@find@in{ v. }
154 \make@find@start{In re }
155 %

```

Sectioning and Table of Contents format for readings.

```

156 \newcommand\mbk@reading{\@startsection{reading}{4}{\z@}%
157     {3.25ex\@plus 1ex \@minus .2ex}%
158     {1.5ex \@plus .2ex}%

174 \vskip 1.5ex \@plus .2ex\relax
175 }
176 %

```

\opinion $\{\langle text \rangle\}$ \par
 Formats the line where the opinion author is given. The argument need not be in braces; it is terminated at the end of the paragraph.

```

177 \def\opinion#1\par{%
178   \vskip 6pt
179   \noindent \textbf{\#1\unskip}\par\nobreak
180 }
181 %

```

\readinghead $\{\langle text \rangle\}$
 Creates a heading inside a reading.

```

182 \def\readinghead#1{%
183   \vskip 6pt
184   \begin{centering}
185   \textbf{\#1}\par
186   \end{centering}
187   \nobreak
188   \vskip 6pt
189 }
190 %

```

4 Statute and Question Environments

statute Formats text for an indented statute's subsections. Statutes are typically formatted as indented paragraphs, with higher levels of indentation pushing the right margin but retaining the indentation structure. (Statutes are typically not formatted with hanging indentation.)

This environment provides for such indentation, for the second and higher levels. (The first level is simply normal paragraph indentation and thus requires no environment.) Each paragraph should be preceded by an `\item` command.

(This environment is currently not very well tested and ought to be improved.)

```

191 \newenvironment{statute}{%
192   \stepcounter{statlevel}%
193   \readingfont
194   \list{}{%
195     \def\makelabel##1{%
196       \itemindent=1.5em
197       \itemsep=\parskip
198       %\labelsep=\z@
199       %\labelwidth=\parindent
200       \partopsep=\z@

```

```

201     \parsep=\z@
202     \topsep=\z@
203   }%
204 }{\endlist}
205 \newcounter{statlevel}
206 %

```

questions [*title*]

Creates an environment for notes and questions. The title of the environment is by default “Notes and Questions,” and may be changed with the optional argument. If the optional argument is empty, no heading is produced.

The contents of the environment should be a list with `\item` commands.

```

207 \newenvironment{questions}[1][Notes and Questions]{%
208   \edfont
209   \vskip 12pt
210   \ifstrempy{#1}{-}{%
211     \begin{centering}
212     \textbf{#1}\par
213     \end{centering}

233 }{\endlist}
234 \newcounter{qnum}[reading]
235 \def\theqnum{\@arabic{c@qnum}}
236 %

```

4.1 Fonts

Two fonts are used throughout the casebook, one for editorial materials and one for readings. The following rules are used to distinguish the two:

- Files starting with `intro-` or `narrative-`, or files ending with `-qs`, are editorial material; anything else is a reading.
- Block quotes are always assumed to be readings.
- Footnotes follow their own rules, described below.

`\edfont` The fonts may also be manually selected, with the commands `\edfont` (for editorial material) and `\readingfont` (for readings). Note that the `\readings` command *does not apply the reading font*. This is because some editors like to include Notes or other materials with a reading-like heading. Such material should be included in an editorially-named file (`narrative-⟨file⟩.tex`), and it will be set in the editorial font.

`\SetEditorialFont` `{⟨font-commands⟩}`
 Executes `⟨font-commands⟩` for any editorial material. By default, editorial material is set in a sans serif font.

```
237 \def\SetEditorialFont#1{%
238   \gdef\edfont{#1\edmaterialtrue}%
239 }
240 \SetEditorialFont{\sffamily}
241 %
```

`\SetReadingFont` `{⟨font-commands⟩}`
 Executes `⟨font-commands⟩` for any reading material. By default, reading material is set in a serif font.

```
242 \def\SetReadingFont#1{%
243   \gdef\readingfont{#1\edmaterialfalse}%
244 }
245 \SetReadingFont{\sfamily}
246 %
```

`\ifedmaterial` A conditional for determining whether the current text is a reading or editorial material.

```
247 \newif\ifedmaterial
248 %
```

This code hooks into the L^AT_EX command that resets the default font, forcing editorial or reading font selection every time the font is reset.

```
249 \ifx\@defaultfamilyhook\@empty

255     \noexpand\@defaultfamilyhook already defined%
256   }{Check the package}%
257 \fi
258 %
```

Implementation

Selects the font based on the filename. #1 is the filename.

```
259 \def\mbk@formatting@for#1{%
260     \find@try\find@in{%
261         {intro-}\edfont\@gobbletwo}%
262         {narrative-}\edfont\@gobbletwo}%
263         {-qs}\edfont\@gobbletwo}%
264     }{#1}\readingfont}%
265 }
266 \make@find@in{intro-}
267 \make@find@in{narrative-}
268 \make@find@in{-qs}
269 %
```

Redefine the quote and quotation environments to use the reading font.

```
270 \renewenvironment{quotation}
271     {\readingfont\list{}}{\listparindent 1.5em%
272         \itemindent      \listparindent
273         \rightmargin     \leftmargin
274         \parsep          \z@ \@plus\p@}%
275     \item\relax}
276 {\endlist}
277 \renewenvironment{quote}
278     {\readingfont\list{}}{\rightmargin\leftmargin}%
279     \item\relax}
280 {\endlist}
281 %
```

4.2 Footnotes

In editorial material, footnotes are assumed to also be editorial material. Small changes to the `\footnote` command must be made to accommodate this.

Footnotes in readings are more complex. Sometimes the footnote is from the original reading, and should retain the original footnote number. In other cases, the reading's editor adds an explanatory footnote. Editorial footnotes are identified with a different footnote symbol, the editorial font, and a notation. Given these two types of footnotes, the usual `\footnote` command is disallowed in reading text, in favor of two separate commands described below.

As a convenience, all footnote commands add `anbefore` them, so spaces before the footnote are ignored.

`\readingfootnote` `{\langle number\rangle}{\langle note-text\rangle}`

Creates a footnote from the original reading in the text. The footnote

`\edfootnote` `{\langle note-text\rangle}`

Creates a footnote by the editors. Symbolic footnote marks are used, and a separate counter `edfnct` is created to track the marks.

```

282 \def\edfootnote#1{%
283     \unskip
284     \refstepcounter{edfnt}%
285     \begingroup
286     \protected@xdef\@thefnmark{\theedfnt}%

\EditorMark $\langle note-text \rangle$

Transforms $\langle note-text \rangle$ with an indication that the text originated from an editor. By default, this just appends “—Eds.”, and the macro can be redefined as desired.

5 Document-Level Structure

The introduction of readings as a document section type requires some modifications to the usual L^AT_EX document structure.

First, the package creates a new running head format, where the chapter name is placed on the left and the current reading is placed on the right.

```

6 Graphics

The following commands are provided for inclusion of graphics. Graphics files may be located either in a module directory or in a separate `images` directory in a repository. The extension `.png`, `.jpg`, or `.pdf` may be omitted from the filename.

`\usegraphic` [*options*] {*filename*}

Include a graphic in the current position inline with text. The *options* are those options available for the `\includegraphics` command of the `graphicx` package.

```

376 \newcommand\usegraphic[2] [] {%
377     \expandafter\mbk@usegraphic\mbk@repo@path,\@nil{#1}{#2}%
378     \mbk@try@file@default
379     \PackageError{modbook}{Graphic `#2.[jpg,png]' not found}{Add the
graphic}%
380     \mbk@try@file@end
381 }
382 \def\mbk@usegraphic#1,#2\@nil#3#4{%
383     \mbk@try@graphic{#1/\mbk@module@cur/#4}{#3}%
384     \mbk@try@graphic{#1/\mbk@module@cur/#4.png}{#3}%
385     \mbk@try@graphic{#1/\mbk@module@cur/#4.jpg}{#3}%
386     \mbk@try@graphic{#1/\mbk@module@cur/#4.pdf}{#3}%
387     \mbk@try@graphic{#1/\mbk@graphicsdir/#4}{#3}%
388     \mbk@try@graphic{#1/\mbk@graphicsdir/#4.png}{#3}%
389     \mbk@try@graphic{#1/\mbk@graphicsdir/#4.jpg}{#3}%
390     \mbk@try@graphic{#1/\mbk@graphicsdir/#4.pdf}{#3}%
391     \ifstrempy{#2}{}\{\mbk@usegraphic#2\@nil{#3}{#4}}%
392 }

```

```

393 %
    By default, graphics take up a maximum of 30% of the text height and 80%
    of the text width. The optional argument to any of the graphics inclusion macros
    can change that.

394 \def\mbk@try@graphic#1#2{%
395     \mbk@try@file{#1}{%
396         \includegraphics[
397             height=0.3\textheight,width=0.8\textwidth,
398             keepaspectratio,
399             #2,
400         ]{#1}%
401     }%
402 }
403 %

```

\heregraphic [*options*] {*filename*}

Centers the graphic at the current position in the text.

```

404 \newcommand\heregraphic[2][]{%
405     \begin{center}
406         \usegraphic[#1]{#2}%
407     \end{center}
408 }
409 %

```

\captionedgraphic [*options*] {*filename*} {*caption*}

Places the graphic in a floating figure with a caption. A cross-reference label of **f:filename** is automatically attached to the figure number.

```

410 \newcommand\captionedgraphic[3][]{%
411     \begin{figure}
412         \heregraphic[#1]{#2}%
413         \caption{#3}%
414         \label{f:#2}%
415     \end{figure}
416 }
417 %

```

Because captions are always editorial material (unless specified otherwise), they are displayed in the editorial font.

```

418 \long\def\@makecaption#1#2{%
419     \vskip\abovecaptionskip
420     \begingroup
421         \edfont

423         \ifdim \wd\@tempboxa >\hsize
424             \textbf{#1}: #2\par
425         \else
426             \global \@minipagefalse
427             \hb@xt\hsize{\hfil\box\@tempboxa\hfil}%

```

```

428     \fi
429   \endgroup
430   \vskip\belowcaptionskip}
431 %

```

`\GraphicsDirectory` $\{\langle directory \rangle\}$

Specifies the directory within repositories where images may be found. By default, it is `images`.

```

432 \def\GraphicsDirectory#1{\gdef\mbk@graphicsdir{#1}}
433 \GraphicsDirectory{images}
434 %

```

7 Dependencies

The package uses `hyperref` for internal cross-references, and `hicite` for URL formatting. Because `hicite` is included, you may use it for managing citations within the casebook as well, although this is optional.

```

435 \RequirePackage{etoolbox}
436 \RequirePackage{strings}
437 \RequirePackage{graphicx}
438 \RequirePackage[hyperfootnotes=false,hidelinks,linktoc=all,bookmarks=false]
    {hyperref}
439 \RequirePackage[journalfonts,italcase,linkurl]{hicite}
440 %

```
